+1-919-537-9807 3740 Peacock Ct, #3 Santa Clara, CA

Skills

Languages Application Programming Interfaces Tools Platforms C, C++, C#, Python, Java Unity, STL, Boost, OpenGL, Qt, XNA GDB, Valgrind, WinDbg, Git, Perforce, Visual Studio Hololens, iOS, Nintendo 3DS, XBOX 360

Employment

7+ years of experience in hands-on software development

WordsAwayMay 2016 – PresentRole: Lead Engineerbrainydexter.github.io

Unity/iOS Game

Technology: C#, Unity, Python

- Worked with designers as the only engineer on team to develop the entire game from ground zero
- Architected Event Aggregator using publisher/subscriber and generics for decoupling modules
- Implemented Trie data structure optimized for space, yielding O(1) word/prefix lookup time
- Implemented Player assist for balancing the game, which may be too hard for some people
- Developed a level editor for designers to adjust the game play & build new levels
- Enabled artists to associate FX prefabs with game events by implementing generic Unity components
- Avoided object allocation during gameplay by recycling objects using object pools
- Procedurally generated letters optimized to use only one sharing material / texture atlas
- Implemented event and component based infrastructure to easily add new levels
- Designed & implemented special powerups based on event aggregator module
- Implemented menu navigation (including popups) by dynamically loading different scenes
- Dynamically updating letters using shader to reflect score multipliers / selected state

• Cavium Inc. Feb 2014 – Present

Role: Lead Software Engineer

SDK development

Technology: C, C++, Python, GDB, Valgrind

- Drove the effort to open source SDK & been working on shaping the SDK from version 1
- Fixed memory leaks in the hardware simulator from 1.9Mb to 0 bytes/packet using Valgrind
- Active member of the gatekeeper team to review APIs for performance and memory leaks
- Designed and implemented network topology to simulate single unit, multiple devices to communicate with outside world and each other using TAP interfaces, python and xml config
- Designed the SDK to be device agnostic which allows for a cleaner library distribution to customers
- Implemented plug and play infrastructure for decoupled modules to subscribe to IPC select() calls
- Module owner of the parser block which is responsible for identifying the incoming network packet

nVidia Graphics

Oct 2012 - Feb 2014

Role: Software Engineer

Graphics Driver development Technology: C++, WinDbg

- Implemented power management and a tool which deals with hysteresis for Windows Blue & Win8
- Implemented display context switching on the fly between native GPU and nvidia GPU
- Lead initiative to ensure both new and old features are compliant with changing hardware

WeAreHolidays Pvt Ltd.

Jan 2012 – Sep 2012

Role: Software Engineer

Leisure Travel Web platform (Startup)

Technology: Java, JPA, Maven, Struts 2, Spring 3, MySQL, Guava

- Developed the core API of the product, with performance and design as its key focus
- Product owner for design and implementing service layer, minimising DB hits
- Designed and implemented entity relationships with graph traversal
- Integrating external APIs for rapid prototyping new ideas
- Lead team of 3 people to deliver product with zero codebase and crazy timelines
- Defined agile processes to improve productivity and bring visibility in team performance

hi5 Networks, San Francisco (USA)

Role: Software Engineer

Social gaming/commerce platform

Technology: Java, (ASP.NET) C#, WCF, SQL Server 2010

- Developed commerce portal with a pluggable architecture integrating multiple payment providers
- Developed end-to-end Credit Card payment system with PCI security compliance
- Developed Analytics API which enabled game developers to publish events consumed by BI team
- Following agile processes, consistently delivered milestones on time

Verizon FIOS, Texas (USA)

Nov 2010 – Apr 2011

May 2011 – Oct 2011

Role: Software Engineer (**Contractor**)

Technology: C++, Python

- Developing framework for inserting ads in HTTP live video streaming on server side
- Developing product to enable live Video streaming through internet across different devices
- Prototype adaptive bitrate video streaming media player on android OS
- Maintain legacy code and integrate it with newly developed product for backward compatibility

Electronic Arts, NC (USA)

July 2010 - Oct 2010

Role: Software Engineer (**Contractor**)

FIFA 3DS (Nintendo 3DS)

Technology: C++, C#, ActionScript2, Nant Scripts, Python

- Extended rendering primitives to support in-game User Interface elements in depth
- Collaborated extensively with the UI designer to get Flash/ActionScript screens working in game
- Modified asset pipeline using Nant scripts to support new game modes
- Moderated C#/Nant scripts which dealt with compiling all the assets of the game
- Setup compiler defines to handle build configurations in sync with other dependency packages
- Worked closely with other team members to ensure project deliverables are completed on-schedule

Charlotte Visualization Center, Charlotte (USA)

July 2009 - June 2010

Role: Research Staff

Technology: C++, OpenGL, Qt, CGAL, Boost

- Developed software for reconstructing terrain-surface using Marching Triangle Algorithm
- Implemented Delaunay Triangulation constraint over point cloud (LIDAR data)
- Implemented renderer in OpenGL to view the CGAL Polyhedron model
- Studied computational geometry concepts such as Polyhedron and half-edge data structures

Independent Projects

HoloHear (Hololens)

Video

- Developed app for people with hearing disabilities to translate words to sign language in realtime
- The app won first prize amidst 20 teams at the Microsoft SF Hololens hackathon

Kolor (PC) <u>brainydexter.github.io</u> Technology: C++, OpenGL, Qt Framework, Boost, OpenGL Mathematics

Designed 3D First Person Shooter with a unique game mechanic of claiming enemies by coloring

- Developed collada-DAE importer to use 3D models into the game
- Implemented custom Frame Transformation classes & First-Person Camera
- Generated Collision detection Bounding Spheres hierarchy information for the imported DAE model
- Implemented efficient hash-based collision detection/resolution for players and bullets
- Improved rendering performance using Vertex Buffer Objects

High Dynamic Range Images

Technology: Matlab

- Implemented HDR algorithm to retrieve the original color response function for a natural scene
- Final image result closely resembles natural scene and lighting conditions as seen with naked eye

Education

University of North Carolina, Charlotte

May 2010 GPA: 3.8/4.00

MS in Computer Science (Graphics and Visualization)

U.P. Technical University, Lucknow(India)

July 2006

BS in Computer Science (Software Development)
